TOUGHNESS AND DURABILITY
DESIGNED TO WORK HARDER, FOR LONGER

DESIGNED TO WORK HARDER, FOR LONGER...

To build a machine compact machine that can withstand the hardest conditions takes intelligent design, and attention to detail. We know that a machine is only as strong as its weakest point, so every weld, every joint, every component is scrutinized to ensure it passes our rigorous durability tests. **Here's the proof.**

TOUGHNESS AND DURABILITY

1. CAST TURRET SUPPORT

The new, tougher cast turret provides maximum durability and service life of the slew mechanism.

3. TOUGHER UNDERCARRIAGE

Comprehensive design and stringent weld inspection ensures that the undercarriage meets our high quality standards. Thicker panels have also been added to provide further protection.

5. HIGH QUALITY HOSES

Braided steel hose protection ensures the highest levels of protection in the harshest environments.

2. DOUBLE MOUNTED FLANGED UPPER ROLLERS

The upper rollers are supported on both sides to reduce stress and improve toughness. These rollers are also flanged to reduce the likelihood of de-tracking in challenging ground conditions.

4. TOUGHER BOOM AND ARM

Our machines may be tough, but with additional arm and bucket cylinder guards they just got tougher. This ensures suitability for a variety of applications.

PERFORMANCE STATISTICS

TOUGHNESS IS WHAT WE DO...

With over 100,000 excavators already working in the world's toughest environments, you can trust our machines to keep working harder - for longer.

SPECIFICATIONS 9057FzTs

Lifting capacity at the arm end without bucket.
For lifting capacity including bucket, weight of the bucket or the bucket with quick coupler must be deducted from the lifting capacities.
Lifting capacities are based on the machine standing on a firm, uniform supporting surface.

Rating over-front (Cf)

Rating over-side (Cs)

- Do not attempt to lift or hold any load that is greater than these rated values at their specified load radius and height. Weight of all accessories must be deducted from the above lifting capacities.
- The rated loads are in compliance with ISO 10567 Hydraulic Excavator Lift Capacity Rating Standard. They do not exceed 87% of hydraulic lifting capacity or 75% tipping load.
- Ratings at bucket lift hook.

- Lifting capacities are based on machine standing on level, firm and uniform ground.
- *Indicates the load is limited by hydraulic capacity rather than tipping capacity.
- Operator should be fully acquainted with the Operator's and Maintenance Instructions before operating this machine and rules for the safe operation of equipment should be adhered to at all times.
